

Lie algebras, Math 128

Syllabus in the form of a table of contents.

January 31, 2002

1	The Campbell Baker Hausdorff Formula	7
1.1	The problem.	7
1.2	The geometric version of the CBH formula.	8
1.3	The Maurer-Cartan equations.	11
1.4	Proof of CBH from Maurer-Cartan.	14
1.5	The differential of the exponential and its inverse.	15
1.6	The averaging method.	16
1.7	The Euler MacLaurin Formula.	18
1.7.1	Euler-MacLaurin for finite intervals.	20
1.8	The universal enveloping algebra.	21
1.8.1	Tensor product of vector spaces.	22
1.8.2	Tensor algebra of a vector space.	23
1.8.3	Construction of the universal enveloping algebra.	23
1.8.4	Extension of a Lie algebra homomorphism to its universal enveloping algebra.	23
1.8.5	Universal enveloping algebra of a direct sum	24
1.8.6	Bialgebra structure.	24
1.9	The Poincaré-Birkhoff-Witt Theorem.	25
1.10	Primitives.	30
1.11	Free Lie algebras	30
1.11.1	Magnas and free magnas on a set	30
1.11.2	The Free Lie Algebra L_X	31
1.11.3	The free associative algebra $\text{Ass}(X)$	32
1.12	Algebraic proof of CBH and explicit formulas.	33
1.12.1	Abstract version of CBH and its algebraic proof.	33
1.12.2	Explicit formula for CBH.	34
2	$sl(2)$ and its Representations.	37
2.1	$sl(2)$ and its irreducible representations.	38
2.2	The Casimir and complete reducibility.	40
2.3	$sl(2)$ is simple.	41
2.4	The Weyl group.	44
3	The classical simple algebras.	45
3.1	Graded simplicity.	45
3.2	$sl(n+1)$	47
3.3	The orthogonal algebras.	47
3.4	The symplectic algebras.	49
3.5	The root structures.	49
3.5.1	$A_n = sl(n+1)$	50
3.5.2	$C_n = sp(2n), n \geq 2$	51
3.5.3	$D_n = o(2n), n \geq 3$	52
3.5.4	$B_n = o(2n+1) n \geq 2$	53
3.5.5	Diagrammatic presentation.	54
3.6	Low dimensional coincidences.	55

4	Engel-Lie-Cartan-Weyl	57
4.1	Engel's theorem	57
4.2	Solvable Lie algebras.	59
4.3	Linear algebra	60
4.4	Cartan's criterion.	62
4.5	Radical.	62
4.6	The Killing form.	63
4.7	Complete reducibility.	64
5	Conjugacy of Cartan subalgebras.	69
5.1	Derivations.	70
5.2	Cartan subalgebras.	72
5.3	Solvable case.	73
5.4	Toral subalgebras and Cartan subalgebras.	74
5.5	Roots.	77
5.6	Bases.	80
5.7	Weyl chambers.	81
5.8	Length.	82
5.9	Conjugacy of Borel subalgebras	83
6	The simple finite dimensional algebras.	87
6.1	Graphs.	87
6.2	Extended Dynkin diagrams.	88
6.3	Perron-Frobenius.	91
6.4	Proof of Perron Frobenius.	94
7	Cyclic highest weight modules.	97
7.1	Verma modules.	98
7.2	When is $\dim \text{Irr}(\lambda) < \infty$?	99
7.3	The value of the Casimir.	101
7.4	The Weyl character formula.	104
7.5	The Weyl dimension formula.	108
7.6	The Kostant multiplicity formula.	109
7.7	Steinberg's formula.	109
7.8	The Freudenthal - de Vries formula.	110
7.9	Fundamental representations.	113
8	Serre's theorem.	117
8.1	The Serre relations.	117
8.2	The first five relations.	118
8.3	Proof of Serre's theorem.	122
9	Clifford algebras and spin representations.	125
9.1	Definition and basic properties	125
9.1.1	Definition.	125
9.1.2	Gradation.	126

9.1.3	$\wedge \mathfrak{p}$ as a $C(\mathfrak{p})$ module.	126
9.1.4	Chevalley's linear identification of $C(\mathfrak{p})$ with $\wedge \mathfrak{p}$	126
9.1.5	The canonical antiautomorphism.	127
9.1.6	Commutator by an element of \mathfrak{p}	128
9.1.7	Commutator by an element of $\wedge^2 \mathfrak{p}$	129
9.2	Orthogonal action of a Lie algebra.	131
9.2.1	Expression for ν in terms of dual bases.	131
9.2.2	The adjoint action of a reductive Lie algebra.	131
9.3	The spin representations.	132
9.3.1	The even dimensional case.	133
9.3.2	The odd dimensional case.	136
9.3.3	Spin ad and V_ρ	137
10	The Kostant Dirac operator	141
10.1	Antisymmetric trilinear forms.	141
10.2	Jacobi and Clifford.	142
10.3	Orthogonal extension of a Lie algebra.	143
10.4	The value of $[v^2 + \nu(\text{Cas}_r)]_0$	145
10.5	Kostant's Dirac Operator.	147
10.6	Eigenvalues of the Dirac operator.	150
10.7	The geometric index theorem.	156
10.7.1	The index of equivariant Fredholm maps.	156
10.7.2	Induced representations and Bott's theorem.	157
10.7.3	Landweber's index theorem.	158
11	The center of $U(\mathfrak{g})$.	161
11.1	The Harish-Chandra isomorphism.	161
11.1.1	Statement	162
11.1.2	Example of $sl(2)$	162
11.1.3	Using Verma modules to prove that $\gamma_H : Z(\mathfrak{g}) \rightarrow U(\mathfrak{h})^W$	163
11.1.4	Outline of proof of bijectivity.	164
11.1.5	Restriction from $S(\mathfrak{g}^*)^{\mathfrak{g}}$ to $S(\mathfrak{h}^*)^W$	165
11.1.6	From $S(\mathfrak{g})^{\mathfrak{g}}$ to $S(\mathfrak{h})^W$	166
11.1.7	Completion of the proof.	166
11.2	Chevalley's theorem.	167
11.2.1	Transcendence degrees.	167
11.2.2	Symmetric polynomials.	168
11.2.3	Fixed fields.	170
11.2.4	Invariants of finite groups.	171
11.2.5	The Hilbert basis theorem.	173
11.2.6	Proof of Chevalley's theorem.	174
