

Contents

1	The Campbell Baker Hausdorff Formula	7
1.1	The problem.	7
1.2	The geometric version of the CBH formula.	8
1.3	The Maurer-Cartan equations.	11
1.4	Proof of CBH from Maurer-Cartan.	14
1.5	The differential of the exponential and its inverse.	15
1.6	The averaging method.	16
1.7	The Euler MacLaurin Formula.	18
1.7.1	Euler-MacLaurin for finite intervals.	20
1.8	The universal enveloping algebra.	21
1.8.1	Tensor product of vector spaces.	22
1.8.2	The tensor product of two algebras.	23
1.8.3	Tensor algebra of a vector space.	23
1.8.4	Construction of the universal enveloping algebra.	24
1.8.5	Extension of a Lie algebra homomorphism to its universal enveloping algebra.	24
1.8.6	Universal enveloping algebra of a direct sum	24
1.8.7	Bialgebra structure.	25
1.9	The Poincaré-Birkhoff-Witt Theorem.	26
1.10	Primitives.	30
1.11	Free Lie algebras	31
1.11.1	Magmas and free magmas on a set	31
1.11.2	The Free Lie Algebra L_X	32
1.11.3	The free associative algebra $\text{Ass}(X)$	32
1.12	Algebraic proof of CBH and explicit formulas.	33
1.12.1	Abstract version of CBH and its algebraic proof.	34
1.12.2	Explicit formula for CBH.	34
2	$sl(2)$ and its Representations.	37
2.1	Low dimensional Lie algebras.	37
2.2	$sl(2)$ and its irreducible representations.	38
2.3	The Casimir element.	41
2.4	$sl(2)$ is simple.	42
2.5	Complete reducibility.	43

2.6	The Weyl group.	44
3	The classical simple algebras.	47
3.1	Graded simplicity.	47
3.2	$sl(n+1)$	49
3.3	The orthogonal algebras.	50
3.4	The symplectic algebras.	52
3.5	The root structures.	54
3.5.1	$A_n = sl(n+1)$	54
3.5.2	$C_n = sp(2n), n \geq 2$	55
3.5.3	$D_n = o(2n), n \geq 3$	56
3.5.4	$B_n = o(2n+1) n \geq 2$	57
3.5.5	Diagrammatic presentation.	58
3.6	Low dimensional coincidences.	58
3.7	Extended diagrams.	60
4	Engel-Lie-Cartan-Weyl	63
4.1	Engel's theorem	63
4.2	Solvable Lie algebras.	65
4.3	Linear algebra	66
4.4	Cartan's criterion.	68
4.5	Radical.	69
4.6	The Killing form.	69
4.7	Complete reducibility.	71
5	Conjugacy of Cartan subalgebras.	75
5.1	Derivations.	76
5.2	Cartan subalgebras.	78
5.3	Solvable case.	79
5.4	Toral subalgebras and Cartan subalgebras.	81
5.5	Roots.	83
5.6	Bases.	87
5.7	Weyl chambers.	89
5.8	Length.	90
5.9	Conjugacy of Borel subalgebras	91
6	The simple finite dimensional algebras.	95
6.1	Simple Lie algebras and irreducible root systems.	96
6.2	The maximal root and the minimal root.	97
6.3	Graphs.	99
6.4	Perron-Frobenius.	100
6.5	Classification of the irreducible Δ	106
6.6	Classification of the irreducible root systems.	107
6.7	The classification of the possible simple Lie algebras.	111

7	Cyclic highest weight modules.	115
7.1	Verma modules.	116
7.2	When is $\dim \text{Irr}(\lambda) < \infty$?	117
7.3	The value of the Casimir.	119
7.4	The Weyl character formula.	123
7.5	The Weyl dimension formula.	127
7.6	The Kostant multiplicity formula.	128
7.7	Steinberg's formula.	129
7.8	The Freudenthal - de Vries formula.	130
7.9	Fundamental representations.	133
7.10	Equal rank subgroups.	135
8	Serre's theorem.	139
8.1	The Serre relations.	139
8.2	The first five relations.	140
8.3	Proof of Serre's theorem.	144
9	Clifford algebras and spin representations.	147
9.1	Definition and basic properties	147
9.1.1	Definition.	147
9.1.2	Gradation.	148
9.1.3	$\wedge \mathfrak{p}$ as a $C(\mathfrak{p})$ module.	148
9.1.4	Chevalley's linear identification of $C(\mathfrak{p})$ with $\wedge \mathfrak{p}$.	148
9.1.5	The canonical antiautomorphism.	149
9.1.6	Commutator by an element of \mathfrak{p} .	150
9.1.7	Commutator by an element of $\wedge^2 \mathfrak{p}$.	151
9.2	Orthogonal action of a Lie algebra.	153
9.2.1	Expression for ν in terms of dual bases.	153
9.2.2	The adjoint action of a reductive Lie algebra.	153
9.3	The spin representations.	154
9.3.1	The even dimensional case.	155
9.3.2	The odd dimensional case.	158
9.3.3	Spin ad and V_ρ .	159
10	The Kostant Dirac operator	163
10.1	Antisymmetric trilinear forms.	163
10.2	Jacobi and Clifford.	164
10.3	Orthogonal extension of a Lie algebra.	165
10.4	The value of $[v^2 + \nu(\text{Cas}_r)]_0$.	167
10.5	Kostant's Dirac Operator.	169
10.6	Eigenvalues of the Dirac operator.	172
10.7	The geometric index theorem.	178
10.7.1	The index of equivariant Fredholm maps.	178
10.7.2	Induced representations and Bott's theorem.	179
10.7.3	Landweber's index theorem.	180

11 The center of $U(\mathfrak{g})$.	183
11.1 The Harish-Chandra isomorphism.	183
11.1.1 Statement	184
11.1.2 Example of $sl(2)$	184
11.1.3 Using Verma modules to prove that $\gamma_H : Z(\mathfrak{g}) \rightarrow U(\mathfrak{h})^W$	185
11.1.4 Outline of proof of bijectivity.	186
11.1.5 Restriction from $S(\mathfrak{g}^*)^{\mathfrak{g}}$ to $S(\mathfrak{h}^*)^W$	187
11.1.6 From $S(\mathfrak{g})^{\mathfrak{g}}$ to $S(\mathfrak{h})^W$	188
11.1.7 Completion of the proof.	188
11.2 Chevalley's theorem.	189
11.2.1 Transcendence degrees.	189
11.2.2 Symmetric polynomials.	190
11.2.3 Fixed fields.	192
11.2.4 Invariants of finite groups.	193
11.2.5 The Hilbert basis theorem.	195
11.2.6 Proof of Chevalley's theorem.	196
